

Concrete Floors Increase Profits

Faster Cans and Feed Savings Prove Results

By W. J. DRYDEN

Faster cans and the saving of feed. Among the most recent but important improvements that may bring these results are concrete feeding floors. Such floors help produce more pork and save feed from being lost in the mud.

Each box should have 10 square feet of floor space. To build 100 square feet of floor, 4 inches thick, it will take 75 sacks of portland cement, 14 cubic yards of sand and 1 cubic yard of gravel or crushed rock.

If the area to be paved is poorly drained, it is best to place the concrete slab on a well-tamped fill of about six inches. If the concrete is to be driven over, it should be six inches thick.

Now concrete should be properly cured by covering with earth or straw as soon as it has hardened enough not to be marred, and then kept moist for at least five days by frequent sprinkling.

Here's a difference you can see and feel yourself with the very first garment we clean for you. Bring your clothes in today—you'll be amazed at how fresh and new-looking they'll be.

Morocco Spotted Horse

By W. J. DRYDEN

The Morocco horse originated in the crossbreeding of the Morocco Barb and the English Hackney and the French coach horse.

The conformation of the Morocco Barb is somewhat similar to the Arabian horse.

In size the Morocco varies from 1,000 to 1,400 pounds. It is a general purpose horse, bred for work as well as pleasure. The working team is fast and steady, and has considerable stamina. They have the power to reproduce themselves true to type and color even when used with other colors and breeds.

To be registered they must stand 14½ hands high. Type must be clean and neat with ample legs to be suitable for either saddle or harness.
